                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean method of making or producing a soy
CC protein product and a method of using a soybean plant be soybean plant, a soy protein producting a soy
CC protein product and a method of using a soybean plant be soybean plant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC nucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents a wild type soybean myo-
CC inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

Cl linked to suitable regulatory sequences, where expression of the chimeric
Cl gene results in a decrease in expression of an endogenous or native gene
CC gene results in a decrease in expression of an endogenous or native gene
CC gene results in a decrease in expression of an endogenous or native gene
CC gene results in a decrease in expression of an endogenous or native gene
CC gene results in a decrease in expression of an endogenous or native gene
CC comprising the chimeric gene (with a heritable phenotype of a seed phytic
CC acid content of less than 14.5 micromol/g, a seed sucrose content of
CC acid content of less than 17 micromol/g, and a seed sucrose content of
CC greater than 200 micromol/g, provided that the plant is not LR33), seeds
CC (comprising crossing LR33 or the plant comprising the chimeric gene with
CC an elite soybean plant and selecting a progeny plant of the cross of
CC crossing step that has a heritable phenotype as mentioned above), seeds
CC from seeds of a soybean plant (homozygous for one or more gene encoding a
CC mutant myo-inositol 1-phosphate synthase having decreased capacity for
CC the synthesis of myo-inositol 1-phosphate, where the gene confers a
CC heritable phenotype as mentioned above, and making or producing a
CC soybean product derived from seeds of a soybean plant with
CC phosphate content of soybean seeds than soybean plant with
CC phosphate content of soybean seeds than soybean plant with
CC phosphate in soy plants (and other legumes) can lead to flatulence
CC when consumed by humans. The present sequence represents a wild-type myo-
cc inositol 1-phosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                             밁
                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                        Complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, ased content of raffinose plus from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR3) or the plant comprising the chimeric gene with a crossing the plant and seed sucrose content of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a crossing step that has a heritable phenotype as mentioned above), seeds of soybean protein product derived from seeds of a soybean plant with the heritable phenotype as mentioned above), and making or producing a content of myo-inositol 1-phosphate, where the gene confers a content protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above), and making or producing a content of soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myo-inositol 1-phosphate sonthase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of a mutant soybean myo-inositol 1-CC phosphate synthase (MI 1-PS) deduced from the coding region of an CC isolated cDNA clone (see AAAC2443). MI 1-PS is involved in glucose CC metabolism to phytic acid, raffinose and stachyose. The MI 1-PS was CC identified in soybean line LR33, a mutagenised line of low raffinose CC saccharide phenotype. Sequencing revealed a single base change mutation CC in the LR33 gene sequence that resulted in a K396N substitution in the CC mutant protein compared to wild-type MI 1-PS (see AAW79740). The mutation CC results in a seed phenotype of very low raffinose saccharide sugars, very CC high sucrose and low phytic acid. The mutated nucleic acid is used to CC phosphate content of soybean seeds, leading to useful soybean products, CC phosphate content of soybean seeds, leading to useful soybean products, CC raffinose and stachyose combined of less than 17 ug/g, a seed content of craffinose content of less than 14.5 ug/g, and a seed CC standardise CC sta

```

The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product and a method of making the product and a method of making or producing a soybean plant and a method of making or producing a soybean plant honozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-cc phosphate synthase having decreasing capacity for the synthase; for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably clinked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic caid content of less than 17 micromol/g, and a seed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of cynathyose of less than 17 micromol/g, and a seed sucrose content of comprising the plant, making a soybean plant with the plant is not LR33), seeds (comprising crossing LR33 or the plant with the heritable phenotype with comprising the chimeric gene with can elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a complement product derived from seeds of a soybean plant with heritable phenotype as mentioned above), and making or producing a complement product derived from seeds of a soybean plant with heritable phenotype as mentioned above), and making or producing a complement of soybean seeds thus leading to valuable and useful consumed by humans. The presence of high concentration of raffinose collipses and content some content seeds thus leading to valuable and useful consumed by humans. The presence represents a mutant myo-inositol 1-phosphate synthase.

                                                                                                                                                                                                                                                                                                                               This is the amino acid sequence of maize myo-inositol 1-phosphate synthase, an enzyme involved in the metabolism of phytate. cDNA (see AAX24407) encoding the enzyme was isolated from a maize embryo (15 day post-pollination) cDNA library. Polynucleotides (see AAX24400, AAX24403, AAX24407 and AAX2440-12) encoding maize phosphatidylinositol-3-kinase (see AAW97880), myo-inositol 1,3,4-triphosphate 5/6-kinase (see AAW97881), myo-inositol 1-phosphate synthase and myo-inositol monophosphatase-3 (see AAW97883), all enzymes involved in phytate metabolism, are claimed. The invention relates to the use of such genes to reduce the levels of phytate, and/or increase the levels of non-phytate phosphorus, in plants used for food or feed. The genes are especially used to improve the nutritional content of plants such as corn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides controlling phytate metabolism in plants - useful for improving the nutritional content of plants, by enhancing levels of non-phytate phosphorus, and reducing phytate levels.
                                                                                                                                                                                                                                                                                 Sequence 510 AA;

COFACTOR: NAD (By similarity).

PATHWAY: Inositol biosynthesis.

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

SIMILARITY: Belongs to the myo-inositol-1-phosphate synthase
